

NSP Compound Feed Enzyme (BGPA61)

DESCRIPTION

- BGPA61 is a blended product with different enzymes, which are obtained by controlled submerged fermentation and special post treatment process using proprietary technologies.
- Based on the physiological features of broilers, compound enzyme BGPA61 is scientifically formulated with NSP enzymes, protease, amylase and lipase etc., and characterized by hydrolyzing non-starch polysaccharides, improving growth and production performance.
- Probiotic supplementation is linked to the development and stabilization of the intestinal flora, in particular, by lessening the environmental stress, helping with reduction of the multiplication of pathogens (e.g E.coli and Salmonella spp.) by changing the composition of gut microflora with probiotic microorganisms including lactic acid bacteria, preventing pathogens from adhering on the mucous membranes.

RECOMMENDATION

200 g/T of complete feed.

PACKAGE

20 kg bag.
